

Levenseat Ltd

Levenseat Environmental Policy

Levenseat Limited is a waste management company, specialising in the use of the waste hierarchy to manage our customer's wastes. Concern for the environment is an integral and fundamental part of Levenseat's corporate business strategy. We are committed to good environmental management practice in connection with carrying out our own business operations. To this end we have carried out a detailed independent Environmental Impact Assessment on our Levenseat operations. Levenseat shall endeavour to work closely with the relevant statutory bodies to meet all applicable legislation and shall seek to make continuous improvement of its performance in Environment and Health and Safety. This policy shall be publicised to all employees and interested parties.

In particular, Levenseat will aim to:

- Encourage customers to conserve resources and improve the reduction, reuse and recycling of materials.
- Continuously assess ideas and economic solutions to conserve resources rather than dispose of them to landfill, and reduce, reuse, recycle and recover resources where practicable.
- Act to minimise any adverse impacts from our operations such as Visual, Litter, Odour or Water Contamination.
- Continue to support the local community in its environmental initiatives.
- Seek to achieve environmental excellence in all our existing and future business operations
- Discuss environmental issues regularly at the highest levels of the company
- Train and regularly consult employees on good environmental practices
- Meet anticipated regulations through monitoring and awareness.
- Liaise with suppliers and customers to facilitate the best possible environmental practices.
